

**NAME OF SCHOOL: MATER MISERICORDIAE SECONDARY SCHOOL,
RUMOMASI**

TERM: FIRST 2026/2027 ACADEMIC SESSION

WEEK: ONE

CLASS: SS3

SUBJECT: Economics

TOPIC: Agricultural Economics

Introduction

- Agricultural economics studies how scarce resources are allocated in the production, distribution and consumption of farm products. In Nigeria agriculture remains a major source of employment and foreign exchange.

Characteristics of agriculture in Nigeria

- Subsistence or semi-commercial production; small holdings with traditional tools; dependence on weather (rain-fed); low capital investment; land tenure problems; poor storage and processing (post-harvest losses); inadequate credit and extension services; drift of young labour to the cities.

Problems of agricultural development

- Land fragmentation (inheritance) and land tenure insecurity; inadequate finance and high cost of inputs; poor rural infrastructure (roads, electricity, storage); pests and diseases; soil degradation and erosion; the farmer–herder conflicts that disrupt production; smuggling and fluctuating commodity prices.

Marketing and contribution

- Agricultural marketing covers assembling, grading, processing, transporting and distributing farm produce; the marketing boards of the past stabilised prices. The sector contributes to GDP, provides food and raw materials, employs labour, earns export revenue (cocoa, rubber, cashew, sesame) and supports rural development.

CLASS EVALUATION

1. State five characteristics of Nigerian agriculture.
2. Explain how land tenure hinders agricultural development.
3. What is agricultural marketing?
4. Mention three ways agriculture contributes to the Nigerian economy.

**NAME OF SCHOOL: MATER MISERICORDIAE SECONDARY SCHOOL,
RUMOMASI**

TERM: FIRST 2026/2027 ACADEMIC SESSION

WEEK: TWO

CLASS: SS3

SUBJECT: Economics

TOPIC: Petroleum & the Nigerian Economy

Introduction

- Petroleum (crude oil) was discovered at Oloibiri in 1956 and has dominated the Nigerian economy since the 1970s. It is the leading source of government revenue and foreign exchange.

Benefits of petroleum

- Huge government revenue (petroleum profits tax, royalties) that funds the budget; foreign exchange earnings; employment in exploration, refining and distribution; provision of petroleum products for industry and transport; revenues for infrastructure; membership of OPEC gives Nigeria influence; the development of a petrochemical industry (fertiliser, plastics).

Problems

- Over-dependence on oil makes the economy vulnerable to price shocks; oil revenue breeds corruption and the neglect of agriculture; crude oil is exported while Nigeria imports refined products because refineries operate below capacity; gas flaring pollutes the environment; oil spills damage farmland and fishing in the Niger Delta; price volatility; the Dutch Disease — oil revenue raises the exchange rate and hurts other exports.

Solutions & OPEC

- Diversification into agriculture, manufacturing and services; local refining and value addition; transparency in oil revenue management (NEITI, PIA 2021); gas monetisation; job creation outside oil. OPEC is the cartel of oil-exporting countries — Nigeria's membership gives a voice in world oil policy.

CLASS EVALUATION

1. Why is Nigeria called a mono-economy?
2. List four benefits of petroleum to Nigeria.
3. State three problems caused by over-dependence on oil.
4. How can Nigeria reduce its dependence on oil?

RUMOMASI**

TERM: FIRST 2026/2027 ACADEMIC SESSION

WEEK: THREE

CLASS: SS3

SUBJECT: Economics

TOPIC: Manufacturing & Industry

Introduction

- Industry is the organised production of goods and services. Manufacturing is the secondary sector — turning raw materials into finished goods. Industrialisation is the process of building a manufacturing base in an economy.

Types of industry

- **Primary** — extraction of raw materials (farming, mining, fishing).
- **Secondary (manufacturing)** — processing and fabrication (textiles, cement, food processing, steel).
- **Tertiary** — services (banking, transport, trade, tourism). Industries can also be classified by scale (small, medium, large), by output (heavy vs light) and by ownership (private, public, mixed).

Location factors

- Nearness to raw materials; availability of power and water; labour supply and skills; transport and market; capital; government policy; climate and land. Nigeria's industries cluster in Lagos, Ogun, Kano, Kaduna and Aba (Nnewi for auto parts).

Importance and problems of manufacturing

- Importance: employment, higher value added, foreign exchange savings, technology transfer, reduced dependence on imports, stimulates agriculture and services. Problems: inadequate power supply; poor infrastructure; dependence on imported raw materials and machines; shortage of skilled labour and capital; smuggling and dumping of cheap imports; policy instability; high cost of production.

CLASS EVALUATION

1. Define industry and state its types.
2. Mention four factors that determine industrial location.
3. State three importance of manufacturing.
4. Why do Nigerian industries perform below capacity?

RUMOMASI**

TERM: FIRST 2026/2027 ACADEMIC SESSION

WEEK: FOUR

CLASS: SS3

SUBJECT: Economics

TOPIC: Transport & Communication

Introduction

- Transport is the movement of people and goods from place to place; communication is the transmission of information and messages. Both are infrastructure services that support every other sector of the economy.

Modes of transport

- **Road** — most used in Nigeria (about 80% of freight): flexible, door-to-door, but congested and costly to maintain.
- **Rail** — cheap for bulk, heavy and long-distance freight; Nigerian railways suffered long neglect and are being modernised (Lagos–Ibadan, Abuja–Kaduna standard gauge).
- **Air** — fastest, for passengers and perishables; expensive, limited capacity.
- **Water** — cheapest for bulk international trade (Lagos, Port Harcourt, Onne, Warri ports); inland waterways (Niger, Benue) are under-used.

Problems of transport in Nigeria

- Poor and potholed roads; congestion in cities (Lagos); inadequate rolling stock on the railway; port congestion and delays; insecurity (kidnapping, banditry on highways); high cost of vehicles, fuel and maintenance; insufficient air and water transport capacity.

Communication systems & importance

- Postal service, telephone (mobile: GSM market liberalisation since 2001 brought cheap calls and mobile money), radio and television, the internet, and now 4G/5G and fibre broadband. Communication stimulates trade, banking (e-banking, POS), education (e-learning), governance and national integration. Problems: poor rural network coverage, high data costs, cybercrime, and inadequate broadband penetration.

CLASS EVALUATION

1. Define transport and communication.
2. Compare road and rail transport advantages and disadvantages.
3. State three problems of road transport in Nigeria.

4. How has GSM improved the Nigerian economy?

RUMOMASI**

TERM: FIRST 2026/2027 ACADEMIC SESSION

WEEK: FIVE

CLASS: SS3

SUBJECT: Economics

TOPIC: Money & Financial Institutions

Introduction

- Money is anything generally accepted as a medium of exchange and a measure of value. It evolved from barter (which failed because of the double coincidence of wants) through commodity money to modern currency.

Functions and qualities of money

- Functions: medium of exchange; measure of value (unit of account); store of value; standard of deferred payment; means of transferring value. Qualities: general acceptability; divisibility; durability; portability; homogeneity; relative scarcity; stability of value; recognisability.

Types of money

- Commodity money (cowries in old Nigeria, salt, gold); coins; paper/notes; bank money (cheques, bank deposits); electronic money (cards, mobile money, transfers); near money (treasury bills, bonds).

Financial institutions in Nigeria

- **Central Bank of Nigeria (CBN)** — the apex bank: issues currency, banker to government and banks, lender of last resort, controls credit and monetary policy.
- **Commercial banks** — accept deposits, grant loans, create money through credit creation (First Bank, GTBank, Access, UBA, Zenith).
- **Merchant banks** — wholesale banking for businesses; **development banks** — long-term finance (BOI, BOA); **microfinance banks** — small loans to the poor; **insurance companies, pension funds, mortgage banks**, and the **capital market** (Nigerian Exchange Group) for long-term funds.

CLASS EVALUATION

1. Define money and state its functions.
2. Why did barter fail as a system of exchange?
3. State four qualities of good money.
4. Distinguish between the functions of the CBN and commercial banks.

**NAME OF SCHOOL: MATER MISERICORDIAE SECONDARY SCHOOL,
RUMOMASI**

TERM: FIRST 2026/2027 ACADEMIC SESSION

WEEK: SIX

CLASS: SS3

SUBJECT: Economics

TOPIC: National Income & Economic Growth

Introduction

- National income is the total monetary value of all goods and services produced in a country in a year. Its measurement shows the size, performance and structure of an economy.

Concepts and measurement

- **GDP** (Gross Domestic Product) — total value of output within the country's borders. **GNP** (Gross National Product) — GDP plus net factor income from abroad. **NNP** = GNP minus depreciation. Per capita income = national income ÷ population (a measure of average welfare). Measurement methods: the output (product) approach, the income approach and the expenditure approach — all should give the same total if properly computed.

Problems of measuring national income in Nigeria

- Subsistence production is not counted; the large informal sector escapes records; unreliable and incomplete statistics; double counting; price changes distort real values (use of real GDP at constant prices); non-monetary and illegal activities are omitted; population figures are uncertain.

Concepts in analysis

- **Real vs nominal income** — nominal at current prices, real at constant prices; **standard of living** — the welfare level of the people; **economic growth** — a sustained increase in real national output; **economic development** — growth plus structural and institutional improvements (less poverty, better education and health). Development can exist without growth? Yes — if output rises but inequality deepens, welfare may not improve.

CLASS EVALUATION

1. Define national income.
2. Differentiate between GDP and GNP.
3. How is per capita income calculated?
4. State four problems of measuring national income in Nigeria.
5. Distinguish between economic growth and economic development.
