

**NAME OF SCHOOL: MATER MISERICORDIAE SECONDARY SCHOOL,
RUMOMASI**

TERM: FIRST 2026/2027 ACADEMIC SESSION

WEEK: ONE

CLASS: SS3

SUBJECT: Home Management

TOPIC: Food Service in the Home

Introduction

- Food service covers the planning, preparation, presentation and serving of meals. Home food service should be attractive, hygienic, economical and suited to the family's timetable and budget.

Planning the menu

- Consider the family's nutritional needs (age, activity, health), likes and dislikes, budget and season; balance the food groups; vary the menu; plan ahead for the week; and involve the family in deciding the menu.

Steps in serving food

- 1. Set the table cleanly (plates, cutlery, glasses, napkins) with guests' or family members' places arranged neatly. 2. Wash hands; serve hot food hot and cold food cold. 3. Use clean serving utensils; choose suitable dishes and covers. 4. Place the main dish so everyone can reach it. 5. Serve in order — guests first, then the family (or serve from the kitchen). 6. Keep the serving area clean.

Table layout and etiquette

- Place: fork left, knife right (blade inwards), spoon right of the knife, glass above the knife, napkin on the side plate or beside the fork; beverages right, bread/butter plate left. Table manners: sit upright, chew with the mouth closed, ask for food politely, use the right cutlery, avoid reaching across the table, and thank the host.

CLASS EVALUATION

1. What should be considered when planning a family menu?
2. List the steps in serving a family dinner.
3. Where is the fork placed at a table setting?
4. State four rules of table etiquette.

TERM: FIRST 2026/2027 ACADEMIC SESSION

WEEK: TWO

CLASS: SS3

SUBJECT: Home Management

TOPIC: Entertaining & Occasion Meals

Introduction

- Entertaining is receiving guests with food and drink. Occasion meals are special meals for events — naming ceremonies, births, birthdays, weddings, Christmas, Sallah, Easter, New Year and funerals.

Types of food service

- **Table service** — waiter service, silver service (served from a platter), family service (dishes pass round).
- **Buffet service** — guests serve themselves from a table; less formal, good for large parties.
- **Self-service/cafeteria** — a counter line. **Finger/fork buffet and cocktail service** — standing guests with small dishes.

Planning an occasion menu

- Consider the occasion, number of guests, culture, budget and the season; include a balance of foods (protein, staple, vegetables, fruit, drink and a sweet); plan to be simple and attractive; make a shopping list and a time plan; prepare what can be made in advance; and involve helpers.

Nigerian occasion dishes

- Jollof rice and fried rice with chicken/fish; pounded yam, semo or amala with soups (egusi, ogbono, melon, afang); moi-moi, fried plantain; small chops (puff-puff, samosa, spring rolls, peppered gizzard); chin-chin, zobo, Chapman; fruit salad; traditional cakes and sweets.

CLASS EVALUATION

1. Define entertaining.
2. Differentiate between buffet and table service.
3. List the points to consider in planning an occasion menu.
4. Name three Nigerian party dishes you would serve at a birthday and why.

WEEK: THREE

CLASS: SS3

SUBJECT: Home Management

TOPIC: Food Science: Emulsions & Leavening

Introduction

- Food science explains the changes that occur in food during preparation. This week covers emulsions (mixing oil and water) and leavening (making mixtures rise) — both central to sauces, mayonnaise, cakes and bread.

Emulsions

- An emulsion is a mixture of two immiscible liquids (oil and water), one dispersed in the other in tiny droplets. Oil-in-water (milk, mayonnaise) and water-in-oil (butter) emulsions. Without an emulsifier the droplets separate. Emulsifiers (egg yolk in mayonnaise, lecithin, mustard, mono- and diglycerides) coat the droplets and keep them suspended. Emulsions separate on standing, freezing or heating; beating and gradual addition make them stable.

Leavening agents

- Agents that produce gas in a dough or batter, making it light and porous: **biological** — yeast (fermentation: sugar → CO₂ + alcohol, in bread); **chemical** — baking powder and baking soda (with acid, e.g. buttermilk, releasing CO₂ in cakes and pancakes); **physical/mechanical** — beating and folding air into mixtures (sponges, meringues); **steam** — water turning to vapour in batter (pancakes, Yorkshire pudding).

Factors for perfect results

- Correct proportions and accurate measuring; fresh leavening agents; the right oven temperature (too hot — crust browns before the centre is done; too cool — a heavy cake); folding not stirring (to keep air); and the right flour (strong flour for bread, soft flour for cakes).

CLASS EVALUATION

1. Define an emulsion.
2. What is the function of an emulsifier? Give an example.
3. Name three types of leavening with an example of each.
4. Why is the oven temperature important in cake making?

WEEK: FOUR

CLASS: SS3

SUBJECT: Home Management

TOPIC: Food Additives & Labelling

Introduction

- Food additives are substances deliberately added to food in small quantities to preserve, flavour, colour or improve it. Food labelling declares what a product contains so the consumer can choose safely.

Types of additives

- **Preservatives** — salt, sugar, vinegar, sodium benzoate, nitrites, sorbates (stop microbes).
- **Antioxidants** — vitamin C (E300), vitamin E — prevent fats going rancid. **Flavourings and flavour enhancers** — vanilla, monosodium glutamate (MSG, E621). **Colourings** — natural (annatto, beetroot) and synthetic (tartrazine, E102). **Sweeteners** — sugar, aspartame, saccharin. **Emulsifiers and stabilisers** — lecithin, gums. **Thickeners** — starch, pectin. **Acidulants** — citric acid, acetic acid.

Why additives are used

- To preserve food and prevent spoilage; to improve taste, colour and appearance; to maintain texture and consistency; to enrich (vitamins and minerals — fortification); and to make processing easier. They must be safe in the quantities used (acceptable daily intake).

Reading food labels

- A good label shows: the product name, ingredients in descending order of quantity, net weight/volume, the manufacturer's name and address, country of origin, batch/best-before date, storage instructions, and nutritional information (energy, protein, fat, carbohydrate, sodium). Additives carry E-numbers. Labels matter for allergies, weight control, religious food rules (halal/kosher) and avoiding harmful additives.

CLASS EVALUATION

1. Define food additive.
2. List six types of additives with one example each.
3. Why are preservatives added to food?
4. State five pieces of information required on a food label.

WEEK: FIVE

CLASS: SS3

SUBJECT: Home Management

TOPIC: Food Commodities: Buying in Season & Storage (Revision)

Introduction

- This week revises the purchase, storage and preservation of food commodities so that the household eats well at low cost throughout the year.

Principles of wise buying

- Buy in season (cheaper and fresher); buy at reputable markets; inspect quality (freshness, colour, no bruises, no pests); compare prices; buy the right quantity; make a list before shopping; avoid impulse buying; buy staples in bulk; keep receipts.

Storage of commodities

- **Cereals and flours** — cool, dry, airtight containers, off the floor; check for weevils. **Roots and tubers** (yam, cassava) — cool, dry, ventilated, away from light. **Fruits and vegetables** — cool place or refrigerator, wash before use. **Meat and fish** — refrigerator or freezer, or smoke/salt. **Fats and oils** — closed dark bottles away from heat. **Milk and dairy** — refrigerate, use by date. **Canned goods** — check expiry, avoid dented tins.

Using leftovers

- Refrigerate quickly, cover, use within 24 hours, reheat thoroughly to boiling, and never reheat more than once.

CLASS EVALUATION

1. Why is buying in season economical?
2. State four points to check when buying fish.
3. How are cereals best stored?
4. What is the correct way to store and reuse leftovers?
