

**NAME OF SCHOOL: MATER MISERICORDIAE SECONDARY SCHOOL,
RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: SEVEN

CLASS: SS1

SUBJECT: Home Management

TOPIC: Meal Planning & Menu Design

Introduction

- Meal planning is deciding in advance what meals the family will eat. It ensures a balanced diet, saves money and time, reduces waste, and makes housekeeping orderly.

Steps in meal planning

- 1. Know the family's needs (ages, activities, health, likes). 2. Consider the budget and what is in season. 3. Use the food groups — energy, body-building, protective. 4. Vary the menu (avoid repetition). 5. Plan the week and write the shopping list. 6. Prepare a time plan for cooking.

The menu design

- A good menu has a staple (carbohydrate), a protein dish, vegetables and a fruit or a drink, planned to balance the day's meals. For the Nigerian family: breakfast (pap with bread or akara), lunch (swallow with soup and fish), supper (rice and stew with vegetables). Adjust portions to activity — a growing child needs more protein, an athlete more carbohydrate.

CLASS EVALUATION

1. Define meal planning.
2. List four factors to consider in meal planning.
3. Design a balanced menu for the day for a family of four.
4. Why is seasonality important in meal planning?

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: EIGHT

CLASS: SS1

SUBJECT: Home Management

TOPIC: Food Purchasing & Budgeting

Introduction

- Food budgeting is allocating the family's money to food; wise purchasing is buying the right quantity and quality at the right price. Together they stretch the food money.

Principles of wise buying

- Buy in season (cheaper, fresher); make a list and stick to it; compare prices and quality in different markets; buy staples in bulk; inspect food for freshness; buy the right quantity (avoid waste); avoid impulse buying; and buy from clean, reputable sellers.

Checking quality

- Meat — firm, fresh smell, no slime, bright colour, from a certified butcher; fish — bright eyes, red gills, firm flesh, fresh smell; vegetables — crisp, fresh colour, no bruises; eggs — clean shells, no cracks, float test for freshness; milk — check the expiry date and seal.

Storing purchases

- Store perishables in the refrigerator; keep dry goods in airtight containers on shelves (not on the floor); keep fruits and vegetables in a cool place; and use the first in first out (FIFO) rule.

CLASS EVALUATION

1. State four principles of food purchasing.
2. How do you test fish for freshness?
3. Why is buying in season economical?
4. Explain the FIFO rule in the store.

RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: NINE

CLASS: SS1

SUBJECT: Home Management

TOPIC: Table Service & Etiquette

Introduction

- Table service is the arrangement and serving of meals; table etiquette is the accepted behaviour at the table. Both make meals pleasant and hygienic.

Table settings

- Place mats; plates in the centre; fork on the left; knife on the right (blade inwards); spoon on the right of the knife; glass above the knife; bread plate on the left; napkin to the left of the fork or on the side plate. Serve hot food hot and cold food cold, with clean serving utensils.

Methods of service

- Family service — dishes passed round; plate service — each plate served in the kitchen; waiter (silver) service — served from a platter by the host or steward; buffet service — guests serve themselves.

Table etiquette

- Sit upright; wait for the host before eating; use the right cutlery; chew with the mouth closed; do not talk with the mouth full; do not reach across the table (ask for dishes); break bread, do not cut it; keep elbows off the table; and thank the host.

CLASS EVALUATION

1. Draw a simple table setting for one person.
2. Differentiate between family and buffet service.
3. State four rules of table etiquette.
4. Why are napkins used at the table?

RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: TEN

CLASS: SS1

SUBJECT: Home Management

TOPIC: Kitchen Hygiene & Safety

Introduction

- Kitchen hygiene is the cleanliness of the kitchen, the cook, equipment and food; safety prevents accidents (cuts, burns, scalds, falls, fires, poisoning) in a busy kitchen.

Personal and environmental hygiene

- Wash hands with soap before handling food and after using the toilet; tie back hair; wear clean clothes and an apron; cover cuts with a plaster; do not cough or sneeze over food; keep the kitchen floors, walls and surfaces clean; keep food covered; manage waste and refuse; control flies, cockroaches and rats; and separate raw and cooked food.

Safety rules

- Handle knives with the blade away from the body; use dry hands for electrical appliances; cut away from yourself and use a chopping board; dry spills immediately; never leave hot oil unattended; turn pan handles inwards; use oven gloves for hot dishes; keep flammables away from the cooker; and have a fire extinguisher or sand bucket and a first-aid box ready.

CLASS EVALUATION

1. State five rules of personal hygiene in the kitchen.
2. What is the difference between hygiene and safety?
3. Give three rules for the safe use of knives.
4. What should you do if oil catches fire in a pan?

RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: ELEVEN

CLASS: SS1

SUBJECT: Home Management

TOPIC: Vegetable & Fruit Cookery

Introduction

- Vegetables and fruits protect the body (vitamins and minerals) and add colour, fibre and flavour to meals. Cooking must preserve their nutrients, colour and texture.

Preparation and cooking

- Wash thoroughly; cut just before cooking (large pieces reduce nutrient loss); cook in little water in a covered pot; cook quickly (steaming or light boiling) and avoid over-cooking; add to boiling water rather than cold; use the cooking water in soups (nutrients have dissolved into it); and serve immediately.

Effects of cooking

- Softens fibre (easier to digest); destroys harmful micro-organisms and some anti-nutrients; makes some nutrients more available (lycopene in tomatoes); but destroys vitamin C and some B vitamins when over-cooked; adds flavour. Methods: boiling, steaming, frying, roasting and blanching.

Methods of preservation

- Refrigeration keeps green leafy vegetables for days; blanching and freezing, dehydration, pickling (vinegar) and canning preserve them longer.

CLASS EVALUATION

1. State three rules for retaining nutrients in vegetables.
2. What is the effect of overcooking on vitamin C?
3. List four methods of cooking vegetables.
4. Why wash vegetables before cutting?

RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: TWELVE

CLASS: SS1

SUBJECT: Home Management

TOPIC: Food Storage & Preservation

Introduction

- Food storage keeps food safe and wholesome until it is used; preservation is the treatment of food to prevent spoilage. Both fight the agents of spoilage — micro-organisms (bacteria, moulds, yeasts), enzymes, insects, rodents and the air and moisture that carry them.

Methods of storage

- **Dry storage** — grains, flour, sugar, spices in cool, dry, rodent-proof cupboards or containers; **cold storage** — the refrigerator (0–4 °C, short-term) and the freezer (–18 °C, long-term); **room storage** — root crops and fruits in a cool, ventilated place, away from sunlight; **the store room** — clean, dry, well ventilated, raised shelves, first-in-first-out.

Principles of preservation

- Remove the conditions micro-organisms need: moisture (drying), warmth (chilling, freezing), air (vacuum, oil), a favourable pH (acid), and the time to grow (chemicals, heat). Preservation therefore works by killing the organisms or stopping their growth.

Methods of preservation

- **Heat** — boiling, pasteurisation, blanching, canning (sterilised in sealed tins — Napoleon's invention); **cold** — refrigeration and freezing; **drying** — sun-drying (fish, pepper, vegetables), the kiln and the drum; **salting and curing** — salted fish and meat; **smoking** — over wood smoke; **sugar** — jams, marmalades (high sugar draws water out); **vinegar** — pickles; **oil and fat** — fried and oil-covered foods; **chemicals** — salt, preservatives (sodium benzoate), lime; **fermentation** — ugba, ogi, yoghurt, palm wine; **irradiation and modern packaging** — vacuum packing and modified atmospheres.

CLASS EVALUATION

1. Define food preservation.
2. Name four agents of food spoilage.
3. Why does salt preserve fish?
4. Differentiate boiling from pasteurisation.
5. State three rules of good dry storage.
