RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: SEVEN

CLASS: SS2

SUBJECT: Geography

TOPIC: Agriculture & Land Use

Introduction

- Land use is the way land is put to use by man. In Nigeria agriculture is the dominant use, and its pattern is closely related to climate, soil, population and market.

Agricultural land use in Nigeria

- **Subsistence farming** — scattered smallholdings, simple tools, food crops (yam, cassava, maize, rice) — dominates the south.
- **Commercial farming** — plantations (oil palm, rubber, cocoa, cashew) and large-scale grain farms in the north (mechanised wheat, rice, maize).
- **Pastoral farming** — cattle, sheep and goats in the savanna (the Fulani herdsman), with transhumance in the dry season.
- The land-use pattern follows rainfall: forest crops in the south, grain and livestock in the north.

Problems of agricultural land use

- Land tenure and fragmentation; shifting cultivation and bush burning; soil erosion and declining fertility; population pressure on farmland; the farmer–herder conflicts; poor storage and market access; and the conversion of farmland to housing and industry.

CLASS EVALUATION

1. Define land use.
2. State two characteristics of subsistence farming.
3. How does rainfall affect Nigerian farming?
4. Mention three problems of agricultural land use.

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: EIGHT

CLASS: SS2

SUBJECT: Geography

TOPIC: Mining of Solid Minerals

Introduction

- Mining is the extraction of minerals from the earth. Nigeria is endowed with solid minerals — tin, columbite, coal, limestone, gold, iron ore, lead, zinc, barytes and gemstones — though their contribution has been dwarfed by petroleum.

Mining methods

- **Opencast (surface) mining** — removing the overburden to reach minerals near the surface: limestone, tin, coal (at shallow depths); cheap but damages the land.
- **Underground (shaft) mining** — digging shafts and galleries for deep veins (coal, gold, tin); more costly and dangerous.
- **Alluvial/placer mining** — washing gravel from river beds for gold, tin, diamonds (the traditional tin and columbite mining on the Jos Plateau).

Locations and uses

- Tin and columbite — Jos Plateau (used in electronics and alloy steel); coal — Enugu (power and fuel); limestone — Nkalagu, Ewekoro, Mfamosing (cement); gold — Zamfara, Osun, Niger state; iron ore — Itakpe (the Ajaokuta steel plant); lead and zinc — Abakaliki; gemstones — Kaduna, Plateau, Bauchi.

Effects of mining

- Positive: employment, revenue, raw materials and infrastructure. Negative: land degradation, pollution of streams, deforestation, and health hazards (lead poisoning in Zamfara's illegal gold mines) — hence the need for regulation.

CLASS EVALUATION

1. Name three minerals mined in Nigeria and their locations.
2. Distinguish between opencast and underground mining.
3. What is alluvial mining?
4. State two effects of mining on the environment.

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: NINE

CLASS: SS2

SUBJECT: Geography

TOPIC: Petroleum & Energy Resources

Introduction

- Energy resources power the economy: petroleum (crude oil and gas), coal, hydroelectricity and the new renewables — solar, wind and biomass.

Petroleum in Nigeria

- Discovered at Oloibiri (Bayelsa) in 1956; the Niger Delta is the main oil province; Nigeria is a leading OPEC producer. The petroleum industry has four stages: exploration (seismic surveys and drilling), production (wells, flow stations), processing (refineries: Port Harcourt, Warri, Kaduna) and distribution/marketing. Products: petrol (PMS), kerosene (DPK), diesel (AGO), aviation fuel, lubricants, bitumen and petrochemicals (fertiliser, plastics).

Problems and energy options

- Gas flaring, oil spills, pipeline vandalism, refinery under-capacity, subsidy controversies and environmental damage in the Delta. Other energy sources: coal (Enugu — under-developed), hydroelectricity (Kainji, Jebba, Shiroro — about 30% of the grid), solar and wind (growing), and biomass (fuelwood — the dominant household fuel in rural areas).

CLASS EVALUATION

1. State the four stages of the petroleum industry.
2. Name the Nigerian refineries.
3. List three energy sources other than oil.
4. Why is gas flaring harmful?

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: TEN

CLASS: SS2

SUBJECT: Geography

TOPIC: Industry & Manufacturing

Introduction

- Industry is the production of goods and services. Manufacturing — the secondary sector — transforms raw materials into finished goods (textiles, cement, food, steel).

Types and location factors

- Types: primary (extraction), secondary (manufacturing), tertiary (services); heavy vs light industries; by scale and ownership. Location factors: raw materials, power, water, labour, transport, market, capital, government policy and land. Nigerian industries cluster in Lagos, Ogun, Kano, Kaduna, Aba and Onitsha (Nnewi for automotive parts).

Industrial development in Nigeria

- The textile industry (Kaduna, Lagos) — cotton through ginning, spinning, weaving; cement (Dangote in Obajana, Ibese); food and beverages (flour milling, brewing, beverages); steel (Ajaokuta and Delta Steel — the iron and steel projects); vehicle assembly (Peugeot, Innoson); and the small and medium enterprises in Aba (shoes, garments) and Nnewi.

Problems of manufacturing

- Power shortages; poor infrastructure and roads; dependence on imported machines and raw materials; smuggling and dumped imports; limited capital and credit; policy instability; and competition from cheap Asian goods.

CLASS EVALUATION

1. Define manufacturing.
2. State four factors of industrial location.
3. Name two industrial centres in Nigeria and one product of each.
4. Mention three problems of Nigerian industries.

RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: ELEVEN

CLASS: SS2

SUBJECT: Geography

TOPIC: Trade & Commerce

Introduction

- Trade is the buying and selling of goods and services; commerce is trade plus the services that aid it (transport, banking, insurance, warehousing, advertising). Trade may be internal or external.

Internal and external trade

- **Internal (domestic) trade** — within the country: wholesale, retail and the markets (the Onitsha Main Market, Kano's Kurmi, Lagos markets).
- **External trade** — between countries: exports (crude oil dominates, with cocoa, cashew, sesame, rubber and processed goods growing) and imports (machinery, vehicles, refined petroleum, food, chemicals).
- The chief trading partners: China, India, USA, Netherlands, Belgium and the United Kingdom. The main ports: Lagos (Apapa, Tin Can), Port Harcourt, Onne, Warri and Calabar.

The balance of trade

- The value of visible exports minus visible imports; Nigeria has usually had a surplus in value terms (oil) but a deficit in volume terms (the manufactured imports), with the balance affected by oil prices and exchange rates. Trade is aided by ECOWAS (the free movement of goods within West Africa) and the AfCFTA.

CLASS EVALUATION

1. Define trade and commerce.
2. Differentiate between internal and external trade.
3. List Nigeria's four main export commodities.
4. Which ports serve Nigeria's external trade?

RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: TWELVE

CLASS: SS2

SUBJECT: Geography

TOPIC: Land Use Planning (Revision & Application)

Introduction

- This week revises the term's themes — agriculture, mining, industry and trade — and ties them to land-use planning: how a country decides what land goes to what use, and why it matters.

Principles of land-use planning

- Survey and classify the land (agricultural, forest, mining, residential, industrial, recreational, conservation); match the use to the physical environment (steep slopes → forest or pasture; river valleys → irrigation); zone settlements and industries away from farmland and water sources; protect reserves and watersheds; and provide infrastructure (roads, power, water) to the planned areas.

The Nigerian situation

- Urban sprawl consumes farmland; the conflict between farming and herding over land; illegal mining sites; and the pollution of streams. Planning tools: town and master plans, the Land Use Act (1978, vesting land in the state), survey and mapping, the National Urban Development Policy and environmental impact assessment (EIA).

CLASS EVALUATION

1. State four principles of land-use planning.
2. How does the Land Use Act affect land ownership?
3. Why does urban sprawl threaten farmland?
4. What is an environmental impact assessment?
