

**NAME OF SCHOOL: MATER MISERICORDIAE SECONDARY SCHOOL,
RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: SEVEN

CLASS: SS3

SUBJECT: Economics

TOPIC: Distribution & Marketing

Introduction

- Distribution is the process of moving goods from producers to consumers — through channels of distribution: the producer → the wholesaler → the retailer → the consumer (the chain of middlemen). Marketing is the wider process of discovering needs and satisfying them: product, price, place, promotion (the 4 Ps).

Functions of the middlemen

- Wholesalers buy in bulk from producers, store, grade and break bulk, and supply retailers; retailers buy in small lots, display, and sell to consumers in convenient quantities and locations. Services: financing, risk-bearing, market information, transportation, and the provision of credit to retailers.

Channels and problems

- Channels vary by commodity (perishable farm produce has a long chain; manufactures sell direct to retail). Problems: long chains raise prices and the middleman's margin; spoilage and wastage; poor storage; transport difficulties; poor market information; and adulteration. Solutions: cooperatives, direct marketing, organised commodity exchanges, and better infrastructure.

CLASS EVALUATION

1. Define distribution and marketing.
2. State the functions of a wholesaler.
3. Why do prices rise through a long chain of middlemen?
4. How can marketing efficiency be improved in Nigeria?

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: EIGHT

CLASS: SS3

SUBJECT: Economics

TOPIC: Consumer Behaviour

Introduction

- Consumer behaviour is the study of how individuals decide what to buy, why, and how they use goods and services. It explains demand and guides producers and government policy.

Factors influencing demand

- **Internal (personal)** — income, taste, age, sex, occupation, family size, expectations; **external** — price, prices of related goods, advertising, fashion, seasons, social class, culture and the influence of peer groups. The consumer is also influenced by the time available, and by information (or its lack).

The rational consumer

- Economic theory assumes rationality: the consumer chooses the combination that gives the greatest satisfaction (utility) per naira — the law of diminishing marginal utility (each extra unit adds less satisfaction). Real consumers, however, buy on habit, impulse, brand loyalty and imitation — the 'irrational' behaviours studied by behavioural economics.

Consumer rights and protection

- The rights: safety, information, choice, to be heard, redress, consumer education and a healthy environment. Protection in Nigeria: the Federal Competition and Consumer Protection Commission (FCCPC) — dealing with fake products, false claims, price gouging and harmful goods; the Standards Organisation of Nigeria (SON) certifies products (the NIS mark); weights and measures are policed.

CLASS EVALUATION

1. Define consumer behaviour.
2. State three external factors that affect demand.
3. Explain the law of diminishing marginal utility.
4. What are the functions of the FCCPC?

RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: NINE

CLASS: SS3

SUBJECT: Economics

TOPIC: Cooperatives & SMEs

Introduction

- Cooperative societies are voluntary associations of members who pool resources for mutual benefit; Small and Medium Enterprises (SMEs) are businesses with small capital and staff (below 50 employees; capital below ₦500 million for SMEs). Both are engines of employment and growth.

Types and principles of cooperatives

- Types: consumer cooperatives (bulk buying for members), producers' cooperatives (marketing farm produce), credit and thrift cooperatives (loans to members), multipurpose cooperatives. Principles: voluntary membership, democratic control (one member, one vote), limited interest on capital, mutual benefit, education and cooperation between societies.

SMEs in Nigeria

- Examples: tailoring, baking, block making, welding, phone repair, catering, transport, agro-processing, trading. Their importance: employment (over 80% of jobs), poverty reduction, innovation, the supply of local products, and the base of industrialisation. Problems: inadequate capital and credit; poor infrastructure (power, roads); lack of skills and management; multiple taxation; insecurity; and difficulty in accessing loans (hence the Bank of Industry and the SME credit schemes).

CLASS EVALUATION

1. Define a cooperative.
2. State three principles of cooperatives.
3. Why are SMEs important to the Nigerian economy?
4. Mention three problems of SMEs and one solution each.

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: TEN

CLASS: SS3

SUBJECT: Economics

TOPIC: Economic Policies & Reforms

Introduction

- Economic policy is the set of measures a government uses to guide the economy: monetary, fiscal, trade, and industrial policy. Reforms are the structural changes made to correct distortions and restore growth.

Policies and their instruments

- **Monetary policy** — the CBN's interest rates (MPR), reserve requirements and open market operations to control inflation and credit. **Fiscal policy** — taxation and public spending (the annual budget) to raise revenue and distribute income. **Trade policy** — tariffs, quotas, import substitution and export promotion. **Industrial policy** — support for manufacturing and SMEs; **exchange-rate policy** — the management of the naira.

Major Nigerian reforms

- The Structural Adjustment Programme (1986) — SAP: devaluation, deregulation, privatisation (commercialisation of state enterprises — the Bureau of Public Enterprises); the banking consolidation (2004 — the recapitalisation to ₦25 billion); the 2005 debt relief ('Paris Club') ; the Treasury Single Account and the Integrated Payroll and Personnel Information System (2012 reforms); the removal of the fuel subsidy (2023); and the naira float (2023).

Effects and evaluation

- Reforms have brought foreign exchange unification, better banking, greater transparency and increased debt space; but SAP and subsidy removal raised prices and hardship. Every reform must balance efficiency with social protection — hence the cash-transfer and palliative programmes.

CLASS EVALUATION

1. Differentiate monetary from fiscal policy.
2. What was SAP?
3. State two objectives of the banking consolidation.
4. How does the removal of a subsidy affect the consumer?

RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: ELEVEN

CLASS: SS3

SUBJECT: Economics

TOPIC: National Income & Measurement

Introduction

- National income is the total value of all goods and services produced in a country in a year. It is the main measure of a nation's economic performance — the 'income statement' of the economy.

The concepts

- **GDP** (Gross Domestic Product) — the value of final goods and services produced within the country's borders in a year (what Nigeria's output is worth); **GNP** (Gross National Product) — GDP plus the net income earned abroad by citizens (minus what foreigners take home). Real GDP removes the effect of price changes (inflation); nominal GDP is at current prices.

Measuring GDP

- Three approaches, which must agree in theory: **the output approach** — the value added by every industry; **the income approach** — wages + rent + interest + profit; **the expenditure approach** — consumption (C) + investment (I) + government spending (G) + exports (X) – imports (M).

Uses and problems

- Uses: comparing growth over time with other countries; planning; the allocation of resources. Problems of measurement in Nigeria: the huge informal sector (roadside trades, subsistence farming) is uncounted; poor statistics; the exclusion of unpaid domestic work; double counting; and the fact that GDP says nothing about how income is shared.

CLASS EVALUATION

1. Define national income.
2. Differentiate GDP from GNP.
3. State the three approaches to measuring GDP.
4. Why is the informal sector a problem for Nigerian statistics?
5. Give two uses of national income figures.

**NAME OF SCHOOL: MATER MISERICORDIAE SECONDARY SCHOOL,
RUMOMASI**

TERM: SECOND 2026/2027 ACADEMIC SESSION

WEEK: TWELVE

CLASS: SS3

SUBJECT: Economics

TOPIC: Economic Development & Planning

Introduction

- Development is not just growth — it is growth plus the improvement of the people's welfare: more income, better health, more education and greater freedom. Planning is government's organized use of resources to pursue development.

Indicators of development

- **Economic** — GDP per capita, the share of industry and services, savings and investment, infrastructure; **social** — literacy, life expectancy, infant mortality, doctors per person, access to clean water; **composite** — the Human Development Index (income, education, health). Nigeria's HDI (about 0.55, mid-table in Africa) shows that income is not translating fast enough into welfare.

Obstacles to Nigerian development

- Dependence on oil (over 80% of exports and about 60% of government revenue); poor infrastructure (power, roads); insecurity; corruption and the weak management of public funds; low productivity and poor technology; population pressure; the brain drain; an unfavourable debt history; and the climate risks (floods, desertification).

Planning in Nigeria

- The national development plans (1962–1985 — the First, Second, Third and Fourth Plans), the SAP (1986), the National Economic Empowerment and Development Strategy (NEEDS, 2004), the Transformation Agenda, the Economic Recovery and Growth Plan (ERGP, 2017), the National Development Plan 2021–2025, and the long-term 'Agenda 2050' — all pursued with the SDGs (the 2030 global agenda).

CLASS EVALUATION

1. Differentiate growth from development.
2. Name three social indicators of development.
3. State four obstacles to Nigeria's development.
4. What is NEEDS?
5. Mention two aims of the National Development Plan.
